#### **DETAILED ACTION**

Claims 1-66 are pending in this application.

## Information Disclosure Statement

1. The information disclosure statements (IDS) submitted on November 9, 2001, June 30, 2003 and August 25, 2003 was noted and the submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner has considered the information disclosure statement.

## **Drawings**

2. The drawing(s) filed November 9, 2001 are approved by the Draftsperson under 37 CFR 1.184 or 1.152.

#### Election/Restrictions

3. Applicant's election without traverse of Group I, claims 1-28, 53-58 and 65 in Paper No. 10 is acknowledged.

#### Disposition of Claims

4. Examiner acknowledges the cancellation of claims 29-52, 59-64 and 66 as disclosed in the response to oral communication dated September 22, 2003.

Art Unit: 1616

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-4, 23 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schneider et al. (US 6,403,057 B1).

Schneider teaches a method of making microcapsules, which can comprise air or a gas (col. 3, lines 15-21). The microcapsules are prepared from biodegradable water-insoluble at room temperature solid lipids. The microcapsules can also contain biodegradable polymers, wherein up to 75% of polymer may be used in the microcapsules (col. 5, lines 24-27). The microcapsules are in the form of an oil-in-water emulsion (col. 2, lines 57-58) and wherein the water phase may contain an effective amount of a surfactant (col. 4, lines 34-35). The microcapsules have an average size between 0.1  $\mu$ m and 1000  $\mu$ m (col. 4, lines 28-20). Column 5, lines 5-16 teaches the use of redispersing agents to prevent particle agglomeration. The prior art does not teach the hydrophilic particles adjacent to the hydrophobic particles as claimed by applicant.

It is the position of the examiner that since the redispersing agent are being used to prevent agglomeration then they must have hydrophilic characteristics. These agents would then surround the particles so they would not agglomerate. It is also the position

of the examiner since column 5, lines 17-23 teach that the microcapsules can contain pores, then it would have been obvious to one of ordinary skill in the art at the time the invention was made to use redispersing agents in the form of particles as to keep the porosity of the microparticles intact.

### Allowable Subject Matter

6. Claims 5-22, 25-28, 53-58 and 65 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

7. Claims 1-4, 23 and 24 stand rejected.

#### Telephone Inquiries

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Konata M. George, whose telephone number is (571) 272-0613. The examiner can normally be reached from 8AM to 5:30PM Monday to Thursday, and on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman Page, can be reached at (571) 272-0602. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-4556 for regular communications and for After Final communications.
